

# ultracure

rising damp prevention

- QUICK & EASY TO INSTALL
- LOW HAZARD
- SPILLAGE & MESS ALMOST ELIMINATED
- 2ND GENERATION
- NO ELECTRIC DPC PUMP REQUIRED
- BBA APPROVED

# ultracure

rising damp prevention

**Highly effective ready-to-use cream emulsion on a silane/siloxane base for masonry injection against rising damp.**

#### Pure Cream Technology

Its unique formulation on a pure cream emulsion base enables superior penetration of the active ingredient within the building material.

#### Cream Consistency

The unique cream consistency allows horizontal application techniques without the injection agent running out. This combined with superior stability in the drill hole ensures the optimal penetration of the active ingredient in all directions.

#### Effective and Safe Protection against Rising Damp

Highly effective formulation enables long lasting and deep penetration of the mortar layer creating a horizontal barrier against rising damp.

#### Universal Use

ultracure Injection Cream allows the effective treatment of alkaline and pH neutral building materials as well as acidic substrates.

#### Environment-friendly

A solvent free product, ultracure Injection Cream is ecologically safe and non-hazardous.

#### Straightforward Installation

Efficient installation by drilling the mortar joint and filling drill holes using a low pressure sprayer or a cartridge gun. No electric DPC pump required.

#### Controllable and Consistent Consumption Rates

The controlled installation technique ensures effective treatment and consistent consumption rates.

#### Proven Performance

Application in practice, independent research and test reports have proven its effectiveness.
